

Transportation

In this busy area, which is also a through-route to downtown and crosstown destinations, continuous improvements to the transportation network are essential to keep the LMA accessible, with patients' needs paramount. MASCO area planning completes studies and makes physical improvements for the benefit of pedestrians, cyclists, transit riders and those who drive to the area. We work with the MBTA to advocate for service improvements and represent the LMA at state and city transportation forums. We also run the LMA's transportation management association, [CommuteWorks](#).
